💍 SoulSync Matrimony

Modern, Privacy-First Shwetambar Jain Matchmaking

Where Traditional Community Values Meet Next-Gen Privacy & Technology

Executive & Investor Presentation

🎯 The Problem & Market Opportunity

- **Horizontal Noise**: Legacy apps (Shaadi, BharatMatrimony) overlook key religious and cultural compatibility factors (sect lineages, strict Jain vs. Chovihar diet).
- **Privacy Deficits**: Photos and phone numbers are exposed or locked behind spam-heavy paywalls.
- **The Family Gap**: Marriage decisions are collaborative, yet platforms fail to support shared family device access.
- **The Opportunity**: A high-trust, privacy-first vertical platform built around verified lineage and mutual consent.

🗺️ End-to-End User Journey

1. **Seamless Onboarding**
   - Passwordless WhatsApp Cloud OTP & decoupled biodata entry.
2. **Deterministic Discovery**
   - SoulSync 100-point compatibility score directly in PostgreSQL.
3. **Controlled Handshake**
   - Private photos locked by default; "Ask to View" and warm etiquette notes.
4. **Mutual Connection**
   - Instant real-time WebSockets chat with multicast family push alerts.

📘 Onboarding & Decoupled Data Model

- **Passwordless WhatsApp Authentication**
  - Live OTP via Meta WhatsApp Cloud API.
  - Argon2 memory-hard hashing; dual access/refresh tokens.
- **Core Profile (`User`)**
  - Identity, Sect (*Murtipujak, Sthanakvasi, Terapanthi*), Sub-Sect (*Visa Oswal, Shrimal, etc.*), Diet, Career, Location.
- **Extended Biodata (`ProfileDetails`)**
  - Cultural Lineage: *Gotra*, ancestral town (*Vatan*), maternal roots (*Mosal*).
  - Family background and optional Kundli/astrological details.

🔮 SoulSync 100-Point Matchmaking Engine

- **Sect (25 pts)**: Exact sect match (25) or compatible Shwetambar branch (15).
- **Sub-Sect (20 pts)**: Exact match / No Bar (20) or shared lineage clustering (15).
- **Diet (25 pts)**: Exact match (25) or Strict Jain ⇄ Chovihar harmony (20).
- **Age Range (15 pts)**: Exact preferred window (15) or ±2 to ±4 year buffers.
- **Location (15 pts)**: City match (15), State match (10), Country match (5).

🛡️ Multi-Tier Consent & Photo Privacy

- **Default Privacy Shield**
  - Candidate photo galleries (`photoUrls`) default to locked (`[]`).
  - Only verified placeholder avatars are visible publicly.
- **"Ask to View Photos" Flow**
  - Request photo access without proposing marriage.
  - Target profile can approve, decline, or revoke access at any time.
- **Dynamic 4-Tier Unlock Engine**
  - Unlocks on self-view, public toggle, approved photo request, or accepted mutual interest.

💬 Real-Time Chat & Multicast Family Alerts

- **Zero Unsolicited DMs**
  - Chat rooms are only created when an Interest Request is accepted.
- **Sub-100ms Messaging**
  - NestJS WebSockets (`Socket.IO`) with typing status and read receipts.
  - Reliable REST fallback endpoints for unstable connections.
- **Multicast Push Notifications (Firebase FCM)**
  - Profiles support multiple device tokens (`fcmTokens`).
  - Alerts trigger simultaneously on both candidate and parent

🚨 Trust, Safety & App Store Compliance

- **Idempotent User Blocking**
  - Immediately deactivates chat rooms, cancels pending interests, and revokes photo permissions.
  - Bidirectional exclusion: blocked users cannot find or view profiles.
- **Community Moderation & Reporting**
  - Structured flags: Fake profile, Harassment, Inappropriate media, Scam/Spam.
  - Submitting a report automatically blocks the user by default.
  - Role-based admin review queues for moderation actions.

⚖️ Regulatory Moat: DPDP Act (2023) Compliance

- **Right to Data Portability (`GET /users/profile/export`)**
  - Machine-readable JSON export of all personal profile data and interaction history.
  - Sensitive security tokens (Argon2 hashes, device IDs) are excluded.
- **Right to be Forgotten (`DELETE /users/profile`)**
  - TypeORM soft deletion (`deletedAt`).
  - Name anonymized to `Deleted Member` and phone scrambled to release unique constraints.

🏗️ Technical Architecture & Moat

- **Backend Stack**: NestJS 12 (ESM) + PostgreSQL 15 + TypeORM 1.1 (`Relation<T>` architecture).
- **Security**: Argon2 passwordless OTP & refresh token rotation, strict RBAC guards.
- **Verification**: Comprehensive Vitest unit test suite with 0 Oxlint errors.
- **Investment Summary**: A production-grade, highly defensible backend engine tailored to an affluent, high-intent community where horizontal platforms fall short.
